AMENDMENTS TO THE SPECIFICATION:

Please amend the paragraph beginning at page 6, line 8, as follows:

Controller (11), sensor switch (10) and sensors (12, 13) would be added and electrically connected for desired sensing and signaling properties. These would also if needed be masked before assembly or final sealing layer is applied. Light reflective material(16) such as SeotehliteTM By ScotchliteTM by 3M and colors can be added or printed before or in the sealing layer(5). Laser cutting, etching and molding portions of one or more layers can add other reflective properties. In addition glass or silicon spheres added to a layer or surface can add reflective properties as well. Once the final sealing layer and adhesive backing 6 are [[can be]] applied the product may be stamped or cut out of a sheet or roll. The product could additionally be left in roll or sheet form with cuts or perforations at or around the product for easy removal or application. This would be readily apparent to anyone schooled in the art. Roll to roll lamination is essentially combining material from one roll with a process to produce a second roll or combine material from one roll with another one or more rolls to produce a subsequent roll.
